REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The closest prior art is considered to be "New Microporous Materials – Preparation of uniform micropores using complexes and their applications" to Mori et al. (Chemical Society of Japan) (cited by applicant). Mori et al. teach a microporous material that is similar in function to zeolite as a microporous material (see translation of article, page 1, second to last line). Mori et al. teach the microporous material has a lattice structure comprising metal atoms and organic ligands. Metals including Mo (atomic number 42) and Ru (atomic number 44) are used in the complexes (see page 6, line 11 following "Conclusion"). The organic component of the lattice may include a carboxylic ligand (see top right Table, page 211 of Japanese article). The metal complexes include binuclear metal structures (see page 6, line 6 under "Conclusion" and figure on page 210 of Japanese article). Mori et al. fail to teach or to render obvious organic electroluminescent compounds used in combination with their lattice structures in a light-emitting layer of a light-emitting device as set forth in the present claims. Accordingly, claims 1-25 are allowed.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dawn Garrett whose telephone number is 571-272-1523. The
